

# WALTER'S BEACON LIST

**MRV 404.0 - Merville (Calonne).**  
**Aero NDB in North of France, total view aerial and big wheel.**  
**Due to the capacitive hat construction a good aerial gain:**  
**a strong signal on a large distance.**

# PE1ABR / Walter's beacon list

## **Rx location:**

**Vlissingen (=Flushing) – utmost SW part of The Netherlands      locator: JO11SK**

**According to my Garmin:      51 deg 27.228 North by 3 deg 34.255 East**

**In the middle of the city, so a high noise level available.**

## **Rx conditions:**

**Rx :      JRC NRD 515 with modified (impedance) Kenwood 250 Hz X-tal filter.**

**Self designed high-dBm active aerial (input/output gain =1)**

**+ 150 square meter untuned coax loop with add-on tuner for more selectivity**

**+ 20dB high-dBm self designed amplifier. See web site at the bottom or Google-it.**

**Self build LF-NDB version of the MFJ-1025 phasing unit for the above two aerials, a modified / cloned / improved version of the MFJ design. This is a device to cancel out or amplify a signal from a specific angle of reception. If they don't prosecute me, I could make it public.**

For all the beacons in this list: If NOT recently logged: Mostly good DX for only once, occasionally: beacon is withdrawn and not known.... Recent withdrawn beacons still listed here (most on a separate, last, page) for reference and awareness for others.

Remember: the best DX is only during the (dark) winter period.

So it could take at least a whole year to hear a seldom heard beacon back again.

AND you need the same DX activity in the air. The older the logging, the harder to get....

Time is in 24:00 hour notation. For the sake of ease and to avoid (personal) errors, time is noted in unusual MET (=local) time. = UTC+1 during winter and UTC+2 during summer.

Lack of sleep is also more easily visible.

Almost all the nearby maritime beacons are replaced with DGPS service from the old locations.

Because I want to note at least "something" of what is heard, the new DGPS service is mentioned.

Almost (?) continuous in the air and also always audible, so a time check is useless.

Help from the NDB compilation list by R.A. Connolly and the NDB web site info from Alan Gale <http://www.alan.gale.clara.net/enter.htm> and Mr. Connolly. <http://www.kilkeel7.freemove.co.uk/> NDB list order possibility via Robert Connolly: <mailto:robert@kilkeel7.freemove.co.uk>

Because the following list (MY list) is a "heard" beacon list, and NOT an availability list of this moment (see Connolly's site), it is probably NOT up-to-date with respect to beacons that are meanwhile taken out of the air!

It is a collection of what is HEARD and most probably still in the air! If out of the air, I'm unaware of that, and the loggings were taken before.

A lot of nice marine NDB loggings have already been removed due to changes.....

(I've heard a lot more than now available. See also the last page with withdrawn NDB's)
